

Matvej Safrankov

Software Engineer

About Me

Software engineer with hands-on experience building production-ready software. I take a fundamentals-first approach and focus on writing maintainable systems.

I enjoy working close to the implementation while taking ownership of architecture and technical decisions.

Outside of work, I'm a drummer and songwriter.

Education

Czech Technical University in Prague

Faculty of Electrical engineering

Open Informatics - Software

Bachelor's-level studies, degree not completed

Languages

- English (fluent)
- Czech (native)
- Russian (fluent)

Skills

- Java, TypeScript, SQL, C
- Spring, Spring Boot, JPA/Hibernate, REST, RabbitMQ
- PostgreSQL, Flyway
- JUnit, Mockito, Node.js Test Runner, Selenium
- Software Architecture, Design Patterns, UML, Algorithms
- Git, GitHub, GitLab, Maven, Yarn

Experience

Thales

Backend Developer

Apr 2026 - Now

Main responsibility:

Led design and implementation of TypeScript custom nodes for a low-code IAM orchestration platform.

Highlights:

- Built the TypeScript monorepo on top of a proprietary 3rd party base, reverse-engineering its behavior to create a maintainable foundation for custom nodes.
- Designed a layered node architecture to make new nodes easy to extend, difficult to misuse, and consistent across services.
- Built a compile-time type-safe API layer so invalid endpoint paths, parameters, and response types are caught before runtime.
- Standardized API errors and graceful failure handling so platform nodes expose consistent, predictable error routes.
- Made an otherwise “untestable” codebase testable by mocking the proprietary base and building both a unit-test setup and platform test framework.
- Defined the project structure and built scaffolding and developer tooling so new teams can extend the system without reinventing its conventions.

Etyka Digital

Java Backend Developer

Oct 2024 - Oct 2025

Main responsibility:

Designing and implementing Java Spring RESTful APIs.

Highlights:

- Integrated the Comgate payment gateway with the platform's subscription system.
- Integrated Spring AI into the application's AI module, streamlining development and improving the determinism of AI-generated results.
- Improved the image-processing pipeline using an OpenCV Difference of Gaussians (DoG) filter, enabling more reliable exam-paper edge detection and image cropping.

Personal Projects

Temporary Friends website:

- Band website for displaying music, streaming platforms and shows
- Using: Next.js / React / Sanity
- <https://temporaryfriends.fun/>
